PROJECTS

Skill Swap Platform | GitHub | *React (Vite), Tailwind CSS, Axios, Node.js, Express.js, MongoDB, JWT, bcryptjs* July 2025
• Developed a full-stack skill-swapping platform featuring dynamic user profiles, secure JWT-based authentication, and bcryptjs password hashing.
• Implemented core features: multi-skill swapping, skill marketplace, request tracking (Pending/Accepted/Rejected/Completed), and advanced search/filter functionality.
• Created an admin dashboard with login via environment variables to manage users (ban/unban/delete), moderate content, and monitor swap logs.

Automated Job Aggregator & Alert Bot | GitHub | *Node.js, GitHub Actions, REST APIs* May 2026
• Engineered a concurrent scraping pipeline for 8 sources using Promise.allSettled, incorporating a transactional failure-rollback logic that prevents state updates if notification delivery fails.
• Designed a serverless state-management system using GitHub Actions Cache, optimizing execution speed by 70% (saving ~24 hours of runner time/year) and removing database write conflicts.
• Implemented cryptographic deduplication using URL query-parameter normalization and SHA-256 indexing, securing API credentials via GitHub Repository Secrets to prevent data exposure.
